Overview

This instruction manual is for SNC easy IP setup, the software for assigning an IP address to Sony network cameras.

Saving SNC easy IP setup software to your PC

- 1 Insert the CD-ROM in your CD-ROM drive. Open the index.html file on the CD-ROM. A cover page will appear automatically in your Web browser.
- **2** Click **Application** and check the EULA.
- 3 Click Agree and install.

Tip

If you are using Windows XP Service Pack 2 or later, Windows Vista or Windows 7, a message regarding the active contents may appear.

4 Follow the Windows instructions to save SNC easy IP setup to the specified folder.

The software is saved.

Assigning the IP Address to the Camera

To connect the camera to a network, you need to assign a new IP address to the camera when you install it for the first time.

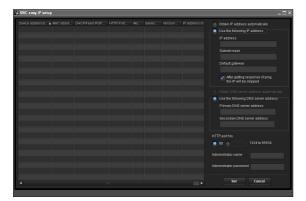

Before starting, connect the camera, referring to "Connection" in the supplied Installation Manual. Consult the administrator of your network for the IP address to be used.

Notes

- SNC easy IP setup may not operate correctly if you use a personal firewall or antivirus software in your computer. In this case, disable the software.
- If you are using Windows XP Service Pack 2 or later, Windows Vista or Windows 7, disable the Windows Firewall function. Otherwise SNC easy IP setup will not operate correctly. For the setting, see "Configuring Windows Firewall" in "When using Windows Vista" on page 8 or "Configuring Windows Firewall" in "When using Windows 7" on page 6.

1 Start SNC easy IP setup.
The network cameras con

The network cameras connected to the local network are detected and listed on the main screen.

Note

The message "User Account Control - An unidentified program wants access to your computer" may appear. In this case, click "Allow".

2 Set the IP address.
Select the camera from the list, then set the IP address.

Tip

The factory setting of the camera network is DHCP mode for both LAN and Wireless LAN.

To specify the IP address manually: Select Use the following IP address, and type the IP address, Subnet mask and Default gateway in the relevant boxes.

To obtain the IP address automatically from a DHCP server:

Select **Obtain IP address automatically**.

Note

When you select **Obtain IP address automatically**, make sure that the DHCP server is operating on the network.

3 Set the DNS server address.

To obtain the DNS server addresses automatically:

Select Obtain DNS server address automatically.

To specify the DNS server addresses manually: Select Use the following DNS server address, and type the Primary DNS server address and Secondary DNS server address in the relevant boxes.

- 4 Set the HTTP port No. Normally, select **80** for the HTTP port No. To use another port number, type a port number between 1024 and 65534 in the text box.
- **5** Enter the administrator name and password. The factory settings for both items are "admin".

Note

The setting is not available for other users except **Administrator**, which is registered on the camera setting screen.

- 6 Confirm that all items are correctly set, then click Set.

 If "Setting OK" is displayed, the IP address is
 - If "Setting OK" is displayed, the IP address is correctly assigned.
- When setting is finished, to access the camera directly, double-click the device name in the list.

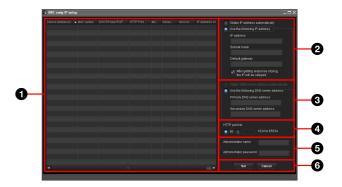

The viewer screen of the network camera is displayed on the Web browser.

Note

If the IP address is not set correctly, the viewer does not appear after step 7. In that case, set the IP address again.

SNC easy IP setup function

Software screen configuration

Camera list

Displays a list of the detected cameras.

2 IP configuration

Set the IP of the selected camera.

3 DNS configuration

Set the DNS of the selected camera.

4 Port configuration

Set the port of the selected camera.

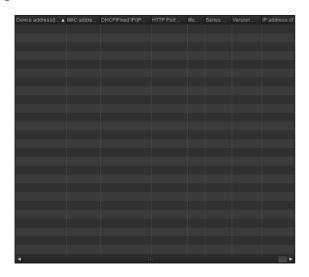

6 Administrator configuration

Register the administrator of the selected camera.

6 Set/Cancel button

Set or cancel the configuration.

Camera list

MAC address

Displays the MAC address of the device.

Device address (IPv4)

Displays the IPv4 address of the device.

DHCP/Fixed IP (IPv4)

Displays the "DHCP" or "Fixed IP" address of the device.

HTTP Port No.

Displays the HTTP port of the device.

Model

Displays the model name of the device.

Serial No.

Displays the serial number of the device.

Version No.

Displays the software version of the device.

IP address of NIC

Displays the IP address of the NIC (Network Interface Card) detected.

2 IP configuration

Obtain IP address automatically

Obtain the IP address automatically.

Use the following IP address

Use the following IP address.

IP address

Enter the IP address.

Subnet mask

Enter the subnet mask.

Default gateway

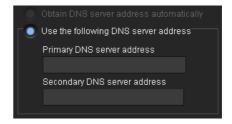

Enter the default gateway.

After getting response of ping, the IP will be skipped

You can check that the entered IP address is available. To perform checking, select the checkbox.

If the specified IP address is already being used, IP address configuration will be skipped.

3 DNS configuration

Obtain DNS server address automatically

Obtain the DNS server address automatically.

Use the following DNS server address

Use the following DNS server address.

Primary DNS server address

Enter the primary DNS server address.

Secondary DNS server address

Enter the secondary DNS server address.

HTTP port No.

Use the port No. 80 or specify another port number (between 1024 and 65534).

Administrator configuration

Administrator name

Enter the administrator name.

Administrator password

Enter the administrator password.

6 Set/Cancel button

Set button

Set the configuration information on the camera.

Cancel button

Clear the configuration and deselect the camera.

Configuring Windows Firewall

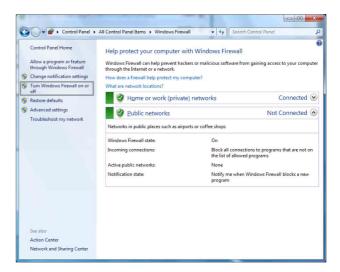

When using Windows 7

Configuring Windows Firewall

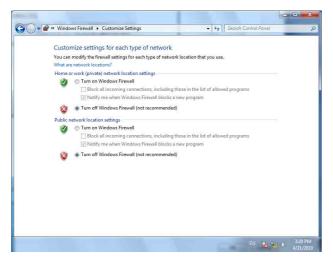

SNC easy IP setup may not operate correctly depending on the configuration of Windows Firewall. (No cameras are shown in the list even if they are detected.) In this case, confirm the Windows Firewall configuration as follows:

To turn Windows Firewall off

- 1 Select Control Panel from the Start menu of Windows.
- 2 Click Windows Firewall.
- **3** Select Turn Windows Firewall on or off.

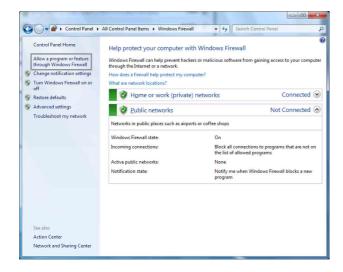

4 Select **Disable Windows Firewall**.

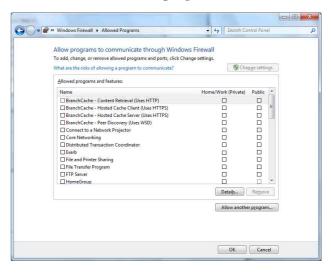

The cameras will be displayed in the list.

To turn Windows Firewall on

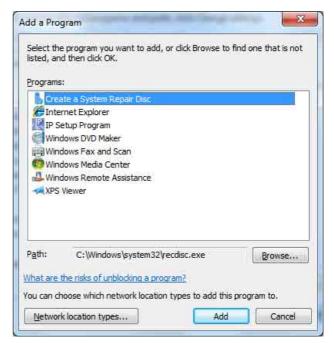

- 1 Select Control Panel from the Start menu of Windows.
- **2** Click Windows Firewall.
- **3** Select Allow a program or feature through Windows Firewall.

4 Select **Allow another program...**

5 Add program.

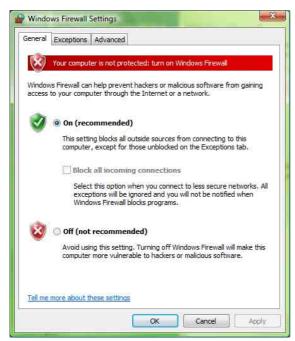

When the above procedure is completed, the cameras connected in the local network are displayed in SNC easy IP setup.

When using Windows Vista

Configuring Windows Firewall

SNC easy IP setup may not operate correctly depending on the configuration of Windows Firewall. (No cameras are shown in the list even if they are detected.) In this case, confirm the Windows Firewall configuration as follows:

- 1 Select Control Panel from the Start menu of Windows.
- 2 Click Windows Firewall.
- 3 Select Turn Windows Firewall on or off. "User Account Control – Windows needs your permission to continue" may appear. In this case, click Continue.
- 4 Select **Off** in the **General** tab.

The cameras will be displayed in the list. If you want to keep Windows Firewall **On**, continue with the following steps.

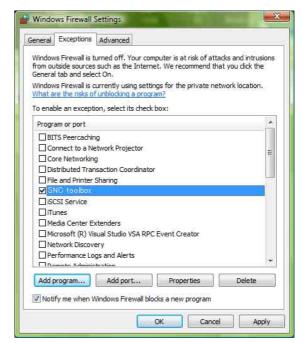

- **5** Select the **Exceptions** tab.
- 6 Click Add Program....

7 If the Add Program dialog appears, select SNC easy IP setup and click **OK**.

SNC easy IP setup is added to the Program or port list

8 Click OK.

When the above procedure is completed, the cameras connected in the local network are displayed in SNC easy IP setup.

Deleting the Software

Delete the SNC easy IP setup file from the folder specified when it was saved.
